MICHIGAN COUNTY PROFILES: 1980 CENSUS

Michigan Metropolitan Information Center
Center for Urban Studies
Wayne State University
January 1983

Wayne State University

10/4/83 U 9455-1 A

This report was prepared and distributed by the **Michigan Metropolitan Information Center (MIMIC)/Center for Urban Studies at Wayne State University.** The content and format of this report was developed jointly by MIMIC/CUS, the City of Detroit Planning Department, and the Southeast Michigan Council of governments (SEMCOG). Questions concerning the contents of this report should be directed to **MIMIC** at (313)577-2180 or by writing to:

MIMIC/CUS
5229 Cass Avenue
Wayne State University
Detroit, MI 48202

MIMIC is a major component of the Michigan Information Center (MIC), a statewide organization established as part of the U.S. Bureau of the Census° State Data Center program. Other major units within the MIC are the Michigan Department of Management and Budget, lead agency for the state, and the Michigan State Library. The Michigan Information Center is directed by Laurence Rosen of the State Office of the Budget in Lansing.

BRIEF DESCRIPTION OF CENSUS SUMMARY TAPES

Summary data for a variety of geographic areas are recorded on magnetic tape which can be read by electronic data processing equipment. The information on the Summary Tape can be printed out by the computer in much the same format as is used in the regular printed reports.

Summary Tapes have two major advantages over the printed reports. First, much more detailed information is contained on the tapes than is available in the published materials. Secondly, the Summary Tapes provide greater flexibility. The computer permits us to aggregate data and make computations for specified variables or geographic areas. With printed reports, this can only be accomplished by adding up rows or columns on an adding machine.

Data collected in the 1980 Census are divided into two groups: universe items and sample items. The universe items are as follows:

Population items: relationship to head, age, race, Spanish origin, sex and marital status.

Housing items: tenure, value (for single-family homes only), contract rent, vacancy status, number of rooms, plumbing facilities, and condominium identification.

All the other variables collected on the census are sample items, including among other things, education, labor force status, occupation and income and poverty status. In general, the sample items were asked in one out of every six households.

The relationship among the summary tapes, levels of geographic aggregation and universe versus sample items is as follows:

Summary Tape	Smallest Level of Geographic Aggregation	Coverage
1	block	universe
2	census tract	universe
3	block group/enum. dist.	sample
4	census tract	sample
5	places with population of 50,000+	sample

SOURCE OF DATA AND FORMS OF PRESENTATION

The information in this profile is compiled from two 1980 Census Summary Tape files. Table 1 and the top part of Table 4, (through the "population per household" section), come from STF1 and represent a condensation of material presented in the earlier series of profiles published in 1982. The items in Tables 2 and 3, and the bottom part of Table 4, come from STF3.

This report differs from a standard Census published report in two ways. First, it contains geographic areas that have been especially designed to represent the geographic units of most interest in Michigan. Thus, Detroit is broken up into the United Community Services subcommunities. In the county reports, villages are separated from their townships. Second, the Profile Report contains many percentages and other calculations which would not be found in most Census published reports. This makes the report easier for the user to follow and use.

When the data are presented in percentage form, the base number for the percentage is usually available. To get back to the whole number, simply multiply the base number by the percentage given. Thus, for example, to find the number of households with a head 65 years old or older, using Table 1, simply multiply "TOTAL HOUSEHOLDS" by the number given in "% HHLD WITH HEAD 65+" and divide by 100. Note that all percentage distributions may not add to 100 due to rounding. A zero usually indicates less than one-half of one percent (less than .5%); in some instances it may actually mean zero percent, or no cases in that category.

OTHER DATA AND TABULATIONS AVAILABLE

The items included in this profile represent a sampling of the data in the summary tape files. Even greater variety and detail are available on the STF1 and STF3 files; more complex and intricate permutations of the information are located on STF2 and STF4.

In the Spring of 1983 the Public Use Microdata Sample (PUMS), will become available, providing complete flexibility of tabulation for all variables within specified geographic areas. If you feel that you may be interested in obtaining more detailed information for your geographic area(s) of interest, please contact the author of this report. Custom computer runs can easily be developed to meet your needs.

HOW TO READ A PROFILE

A description of the demographic characteristics of the subcommunities of Detroit, the minor civil divisions of each southeast Michigan county, or the counties of Michigan can be obtained by using one of the Profiles in this series. A map showing the areas is in the back of the report.

To obtain information for a particular area using that area's report, refer first to the map for the area's name or number. Then read across the top of the table to that area and down for the various data items. Thus, Table 1 for Hazel Park, in Oakland County, shows the following information:

CHILDREN (0-17) BY HHLD TYPE (%)	
IN TWO PARENT HHLD	69
IN ONE PARENT HHLD	23
OTHER HHLD TYPE	9

This tells us that over two-thirds (69%) of Hazel Park's children are living in two parent households. If we want to know how many children this represents, using the method described above we multiply the total population (20,914) by .30 (from Table 1, 30% of the population is 0-17) to obtain the number of children, and take that number (6274) multiplied by .69 to find out the number living with two parents. The answer is 4329.

GEOGRAPHIC AREAS

Profiles in this series are being produced at several different levels of geography. The State of Michigan report shows data by county. The City of Detroit report presents data by subcommunity, a group of subdivisions within the city that are composed of census tracts.

The reports for Southeast Michigan counties show data for a unit of geography known as SEMCOG Minor Civil Division. In this presentation, cities are shown separately, as are villages. Townships are shown for the balance of township territory that is not in any incorporated area. Thus, if a township contains a village, the data for the village are shown separately and the data for the township are shown without including the village. This is a different form of presentation than that found in Bureau of the Census Reports, and thus total population and other data items for the township will be different.

Note that the names shown for townships always include either "TWP" or "T," so that the township can readily be distinguished from a village or city of the same name. Examples of this include Royal Oak, Milford and Plymouth.

GLOSSARY

Age: The median age is the point at which half the population (in the geographic area being presented) is older and half is younger. Generally, communities with many children will have lower median age figures than communities with relatively few children.

Civilian Labor Force: The labor force consists of persons who are employed and persons who are unemployed. Only people 16 years old or older are eligible to be in the labor force; a 14 year old teenager who baby-sits is not considered "employed." The civilian labor force excludes members of the armed forces; an insignificant group in most Michigan communities.

Contract Rent: Contract rent is the amount of money paid to the landlord for rental of the housing unit. It may or may not include payment for various utilities. For example, most apartment rentals include water and some also include heat; single-family rentals usually include no utilities. More detailed data to be made available in later census products will provide information on the types of utilities included in the rent, and their cost if they are not included.

Education: See "Years of School Completed."

Employed: A person aged 16+ is employed if a "yes" response was given to the question: "Did this person work at any time last week?" on the census form. Thus, work of even a few hours counts as employment, even if the person's primary activity was as a student, housewife, or retiree. Also counted as employed are persons who were "with a job but not at work," due to temporary absence resulting from illness, vacation, or a labor dispute. Excluded are persons whose only work was "without pay in a family business" and who worked less than 15 hours in the reference week.

Family: In census data, a family consists of two or more persons, related to each other, living in a household. Thus, the major differences between families and households are twofold: (1) one-person households are not families, and (2) persons unrelated to the householder are not part of the family. If there are two unrelated persons living together (roommates), neither is considered a family and there is no family in that household. If the household consisted of a parent, child and another person unrelated to them, then there would be one family of two people and one unrelated individual.

Group Quarters: A group quarters is a place that is not a housing unit where people live. (See definition for housing unit.) Most group quarters are institutional types of places such as dormitories, orphanages, nursing homes and prisons.

The item is of interest when it shows a large percentage of the total population in a given geographic area, as the group quarters population may be distorting other data for the area. For example, Northville Township contains a prison (Detroit House of Correction), a group quarters which contains mostly people in a restricted age group. This affects the age distribution for the township as a whole.

Household: A household is one person or a group of persons occupying a housing unit. Thus, the count of households is the same as the count of occupied housing units.

Household, Female-Headed: A female-headed household is one where the householder is female and does not have a spouse present and living in the household.

Household, Head 65+: In these households, the householder is 65 years old or older, regardless of marital status or age of spouse.

Householder: The person "in charge" of the household. In a one-person household, the one person is always the householder. When the person indicated as householder is married with the spouse present in the household, we identify a "married couple householder." Otherwise, householders are tabulated by sex.

Housing Unit: A housing unit is a room or group of rooms occupied or intended for occupancy as separate living quarters by a person or group of persons. Mostly, housing units are houses, flats, apartments or other places usually thought of as homes. Occasionally, a housing unit may be located in a warehouse, office building, trailer on the grounds of a house, boat, or other unusual place.

Income, Household and Family: All income data are based on 1979 reported income for all persons 14 or older. Household income includes everyone in the household. Family income is calculated separately for each family (see "Family"). Family income usually comes out higher than household income because of the exclusion of one-person households.

Note: Median income figures for a given geographic area may vary slightly between different printed reports because of variations in the basis for calculation. These differences are not significant.

Income Type: This item presents useful information on the degree of dependency present in the population of the area. The opposite of "earnings" is households without earned income, a group consisting primarily of households subsisting on public assistance, social security, or a combination of the two. Thus, the higher the earnings percentage, the more self-sufficient are the households of the community.

Note: Because the census is based on self-reporting, discrepancies exist between reported counts of social security and public assistance households and the actual counts reported by the agencies disseminating these funds. These items should be taken as a guide, and used primarily on a comparative basis between communities, rather than as a literal statement of assisted or social security households. Also note that these data are

based on 1979 income sources, and the same households may be in quite different situations today.

Industry: This item is presented only for employed persons; if the unemployed were included, it might well show heavier concentrations in manufacturing and other areas where unemployment is especially high. The groups presented here are collapsed from a total of 231 separately coded items. For further definition, see Census Report PHC80-R3, the Classified Index of Industries and Occupations. The "Other" category includes agriculture, forestry, and fisheries, mining, and construction. Motor Vehicle Manufacturing is not presented separately because the data are not available on STF3. "Prof services" includes health, education, and other service industries of a professional nature.

Labor Force Participation Rate: This item is calculated by dividing the civilian labor force by the total population 16 and older. It is presented separately for the entire eligible group (All Persons 16+), for all eligible women, and for eligible women with children.

Language Other Than English Spoken in Home: This is designed to present information on current language, rather than on mother tongue as in previous census data. A high "% Yes" here indicates either a large number of recent immigrants, or a dense, stable ethnic community. For the population 18 and older, this is the variable used to determine language minorities under the voting rights act.

Occupation: This item is presented only for employed persons; the distribution might well be different if data were available for the unemployed as well. The major groups presented here are summarized from 503 separately coded items. For further definition, see the Classified Index of Industries and Occupations, Census Report PHC80-R3. Note that the group formerly identified as "clerical" has, with some variation, been renamed "administrative support." "Farm, Forest, Fishing" includes occupations concentrated in the agricultural, forestry and fishing industries and is relatively uncommon in urban areas.

Owner-Occupied: A unit is defined as owner-occupied if it is reported as "owned or being bought" by someone in the household. It can be mortgaged and does not have to be fully paid for.

Percentage of K-12 Students in Non-Public School: This item gives the percentage of students in grades kindergarten through twelfth grade who are attending a private or parochial school.

Place of Birth: In this tabulation, Michigan and Other United States together represent the native born population. Any person born in U.S. territory (including Puerto Rico, Guam, etc.) or having at least one American citizen parent is native born. The item is based on the mother's place of residence, not on the location of the hospital.

Place of Work: The Detroit Standard Metropolitan Statistical Area (SMSA) is comprised of Wayne, Oakland, Macomb, Livingston, Lapeer and St. Clair Counties. Within this area, place of work is reported as City of Detroit, elsewhere in the Detroit SMSA, or outside of the SMSA. For other geographic areas covered by these reports, appropriate reporting units are substituted. Because a large number of workers did not report a codable workplace, the count of "workers reporting workplace" is provided to indicate the basis for the calculation. The percentage for which workplace is not coded can be calculated by comparing "wkrs reprting wkplace" with "employed" at the top of Table 3.

Population per Household: This statistic is calculated by dividing the total population in households by the total number of occupied housing units, or households. It cannot be lower than 1.000 and rarely goes above 4.000. A high population per household indicates many large families; a very low figure (under 2.000) indicates an unusually large number of one-person households and very few children.

Poverty: Families and unrelated individuals are classified as being above or below the poverty level by comparing their total 1979 income to an income cutoff or "poverty threshold." The weighted average thresholds are shown below:

Size of Family	Weighted Average Threshold
1	$ 3,686
2	$ 4,723
3	$ 5,787
4	$ 7,412
5	$ 8,776
6	$ 9,915
7	$11,237
8	$12,484
9 or more	$14,812

For further details, see the Census Users Guide, or Summary Tape File 3 documentation, page 277.

Seven separate poverty calculations are presented in Table 2: three for population groups, three for household groups, and one for families. The denominators for these items--total population, population 65 and older, and so forth--can be inferred from the items presented in Table 1. In many communities, a high percentage in poverty may be based on a small number of cases.

Race: Persons were asked on the census questionnaire to identify themselves according to 14 racial groups, including "White," and "Black or Negro." Spanish identification is independent of the race item; in other words, persons identifying as Spanish are also identified as white, black or something else. For purposes of this profile, we have subtracted the Spanish identifying population of the various race groups, so that the four groups: White, not Spanish; Black, not Spanish; Other, not

Spanish; and Spanish Origin, add to the total population.

Rent: (See contract rent).

Renter-Occupied: Any occupied unit which is not owner-occupied is renter-occupied, even if no cash rent is involved.

Residence in 1975: This is a person-based variable, calculated for all persons five and older. Thus, it is different from the year moved into unit item in Table 4. The item is a good measure of mobility for the community. More detail on "elsewhere in Michigan" is available on STF3.

Structure: There is no count, anywhere in census data, that is structure-based. All data for structure are presented on the basis of units. In other words, a ten unit apartment building counts ten times in the distribution "year structure built," where a single family home counts once. The Table 4 distributions of structure type and year structure built are both based on total housing units.

Structure Type: As presented in this item, "single family home" includes only those indicated as "single family, detached." The count of "attached single family" units is included in "2-4 unit structure," consistent with Michigan classification of duplexes and row houses as multiple unit structures. This item is subject to considerable error in respondent reporting, as the difference between "units in structure" and "units at address" is not well understood. This leads to an overreporting of single family units and underreporting of units in multiple unit structures. Thus, the data included here may need to be interpreted with caution.

Unemployed: To be unemployed, a person must be (1) 16 or older, (2) not counted as "employed" under that definition, (3) looking for work during the last 4 weeks, and (4) available to accept a job. Persons on temporary layoff, from which a callback is expected, are also included among the unemployed.

Unemployment Rate: The unemployment rate is defined as the number of unemployed persons divided by the total civilian labor force (employed plus unemployed). The data present here, of course, reflect the economic situation of April 1980, and in most cases understate the situation of January 1983. However, the comparative statistics across communities should be of value.

Value: The respondent's estimate of the value of the property. Value is reported only for single-family units on lots of ten acres or less and that have no business on the property. Other owner-occupied units, such as two-flats where the owner lives in one of the units, or cooperatives and condominiums, or trailers, are not included in the value distribution or the calculation of mean and median value.

Vehicles Available: "Vehicles," as used in this item, includes the total number of automobiles, vans, and light trucks available at home for use of members of the household.

Workers Employed in Public Sector: "Employed in Public Sector" is defined here as persons reporting that they were federal government, state government, or local government employees. Most workers who are not "employed in public sector" are employed in the private sector. Some are self-employed, and a few are unpaid workers in family businesses.

Year Moved Into Unit: Unlike the "Residence in 1975" item, this distribution is based on households. It is based on the move-in date of the householder. In some cases, move-in dates for other members of the household may differ. Overall, this item is a good measure of the relative stability or mobility of a community.

Year Structure Built: This item is based on respondent knowledge and recollection, and is thus subject to substantial error. It is probably best as a statement of units built in 1970 or later. Use it with caution.

Years of School Completed: Persons having a General Education Diploma, acquired by passing a high school equivalency examination, are called "GED" and are included in the high school graduate category. This variable is calculated only for persons 25 and older, most of whom have completed their education. However, persons 25 or older who are still in school are included in the tabulation, on the basis of the years they have completed. Note that to get the total "% High School Graduate," the last three numbers must be added together.
